

Enhanced user interface for an effortless document management experience

1. Main Navigation

Better visibility with a simplified navigation panel view giving you access to choose your desired default view.

2. Pinned View

We strengthened our pinned view giving it a new location and grouping functionality for a smarter way to organize your vital documents.

3. Search Bar

Faster way to navigate M-Files with an easier way to locate our search bar and create button.

4. Panel Tabs

Cleaner design to navigate through your documents' information by repositioning the right panel tabs vertically on the right.

Why are we doing this refresh?

M-Files Desktop application is our key product, accessed by hundreds of thousands of users daily. We are now thoroughly updating the user interface, modernizing it, and aligning it with our brand look and feel.

1. Utilizing the Latest UI Libraries

Modern digital products need to be constantly updated to keep them on edge and ensure overall high quality. The main UI of the Desktop app design is now modernized, using the latest UI libraries, and providing a fresh look and feel.

2. World-leading Usability

We strive for world-leading usability. A big part of this is achieved through a clear visual hierarchy and easy-to-locate main controls for knowledge workers. We achieved this by simplifying the main view, doing away with the heavy borders between views, and making it easier for users to focus on content and navigate around the UI.

3. Brand Alignment

We want to align the design with our range of applications to build a stronger brand identity, sense of quality, and improve the consistency of the user experience, even if users operate across other M-Files versions like Web and Android/iOS Mobile applications.
